

LN LEGACY NETWORK

Whitepaper V2.0

**Gamified personal development through
AI and blockchain technology**

Disclaimer

The Whitepaper is intended for general informational purposes. The information set forth below should not be considered exhaustive and does not imply any elements of a contractual relationship. Its sole purpose is to provide relevant and reasonable information to potential utility token holders in order for them to determine whether to undertake a thorough analysis of the company with the intent of acquiring Legacy Tokens (LGCN). Nothing in this Whitepaper shall be deemed to constitute a prospectus of any sort of a solicitation for investment, nor does it, in any way, pertain to an offering or a solicitation to buy any securities in any jurisdiction. The document is not composed in accordance with, and is not subject to, laws or regulations of any jurisdiction which are designed to protect investors. Certain statements, estimates, and financial information contained within this whitepaper constitute forward-looking, or pro-forma statements, and information. Such statements or information involve known and unknown risks and uncertainties which may cause actual events or results to differ materially from the estimates or the results implied or expressed in such forward-looking statements.

About Legacy Network

Legacy Network is an international technology company based in Liechtenstein/Switzerland. Our mission is to sustainably improve people's lives by developing innovative technology and building international communities around **personal development**. We firmly believe that personal development is the key to success in all life areas, as well as the solution for many global problems. For this reason, we committed ourselves to find new ways in order to provide something of true value to the world. Our central product is a **gamified education app**, which uses a **play to earn system to reward its users with crypto**. The app is powered by the first ever **artificial intelligence**, which analyses several aspects of a user's personality and reflects the collected information back to him.

Our Vision

Our vision is to create the world's **biggest personal development ecosystem** with our technology as the gate to a successful and fulfilling life. Great technology should work for the user, not against him. We live in an era, where big tech companies know much more about us and our psychology, than we do. This valuable data is used to sell us more products and to make us neurologically addicted to certain services. We aim to create **a technology, which collects the same data but provides it to the user**. A technology, developed to give people deep insights into the **programming** and functionality **of their own brain** along with **individual and playful step by step guidance** on how to use the new gained knowledge in their own favor.

Initial Position

As things stand today, **over 35% of people in Europe suffer from a mental illness that requires treatment**. This does not include harmful behaviors and traits that severely limit a person's quality of life but are not recognized as an illness. The average person today is plagued by: Diverse **anxieties, sleep disturbances, recurring negative emotions** as well as **poor physical condition**. These matters in turn negatively impact his success in various key areas of life. We humans tend to perceive certain circumstances as "not so bad" as far as most of them are concerned. In reality, the facts mentioned have **disastrous consequences** both for the individuals affected and for society as a whole.

Aggression, hatred and criminality within society are largely **due to frustration**. Frustration, in turn, can be attributed mainly to a lack of success in important areas of life. The main reason for the described problem lies mainly in the **human preference for short-term gratification** over long-term success, happiness and long-term health as a basic condition. In general, it can be said that the **average person** of today **is trapped** in a state of aimless distraction and lacks the necessary strategies and tools to escape from it.

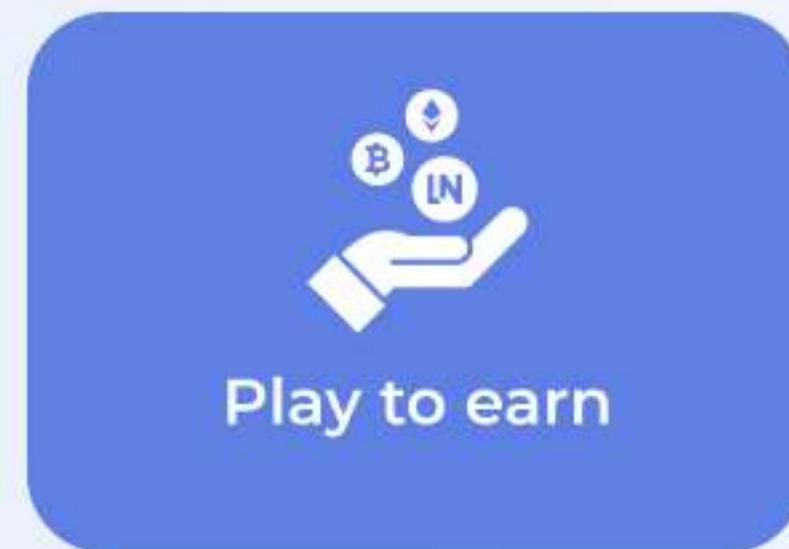

Our Approach

We are developing a logic-respectively **science based play to earn system**, which explains to the user in a playful way his own behavior as well as that of his fellow people and teaches him **step by step effective life strategies**. The user learns important skills that support him actively and independently to create a fulfilling and successful life. The content is mainly from the fields of **psychology, sociology, neurology and biology**. The contents originate from experts and is subject to **strict quality control**. Our goal with the play to earn system is for the user to not view the learning process as an expense. Even though we have no direct competition in terms of the technology, we still compete with other companies for the user's attention.

A big problem of our time is the neurological dependence on dopamine, or short-term reward release in the brain. By designing our system to create what in this case is a **positive dependency**, we ensure that our ecosystem is actively used and that **the user retains his motivation**.

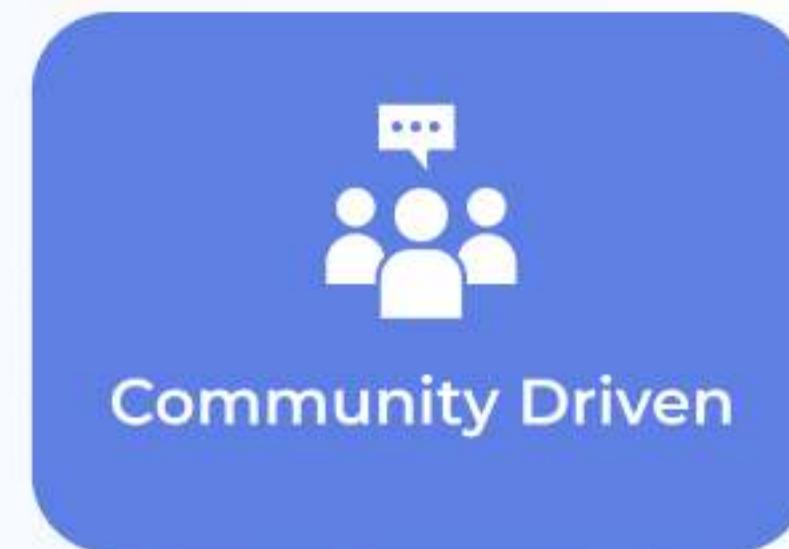

Gamified Education

Play to earn

AI Powered

Community Driven

Personal Development

What is Personal Development About?

Personal development is about gaining a deep **understanding** of our own psyche as well as human nature in general. The goal is to find harmful traits in ourselves, understand how they prevent us from succeeding, and replace them step by step with more effective traits. During this developmental journey, we can **find ourselves, overcome our fears and weaknesses, develop life-changing skills and unlock our full potential.**

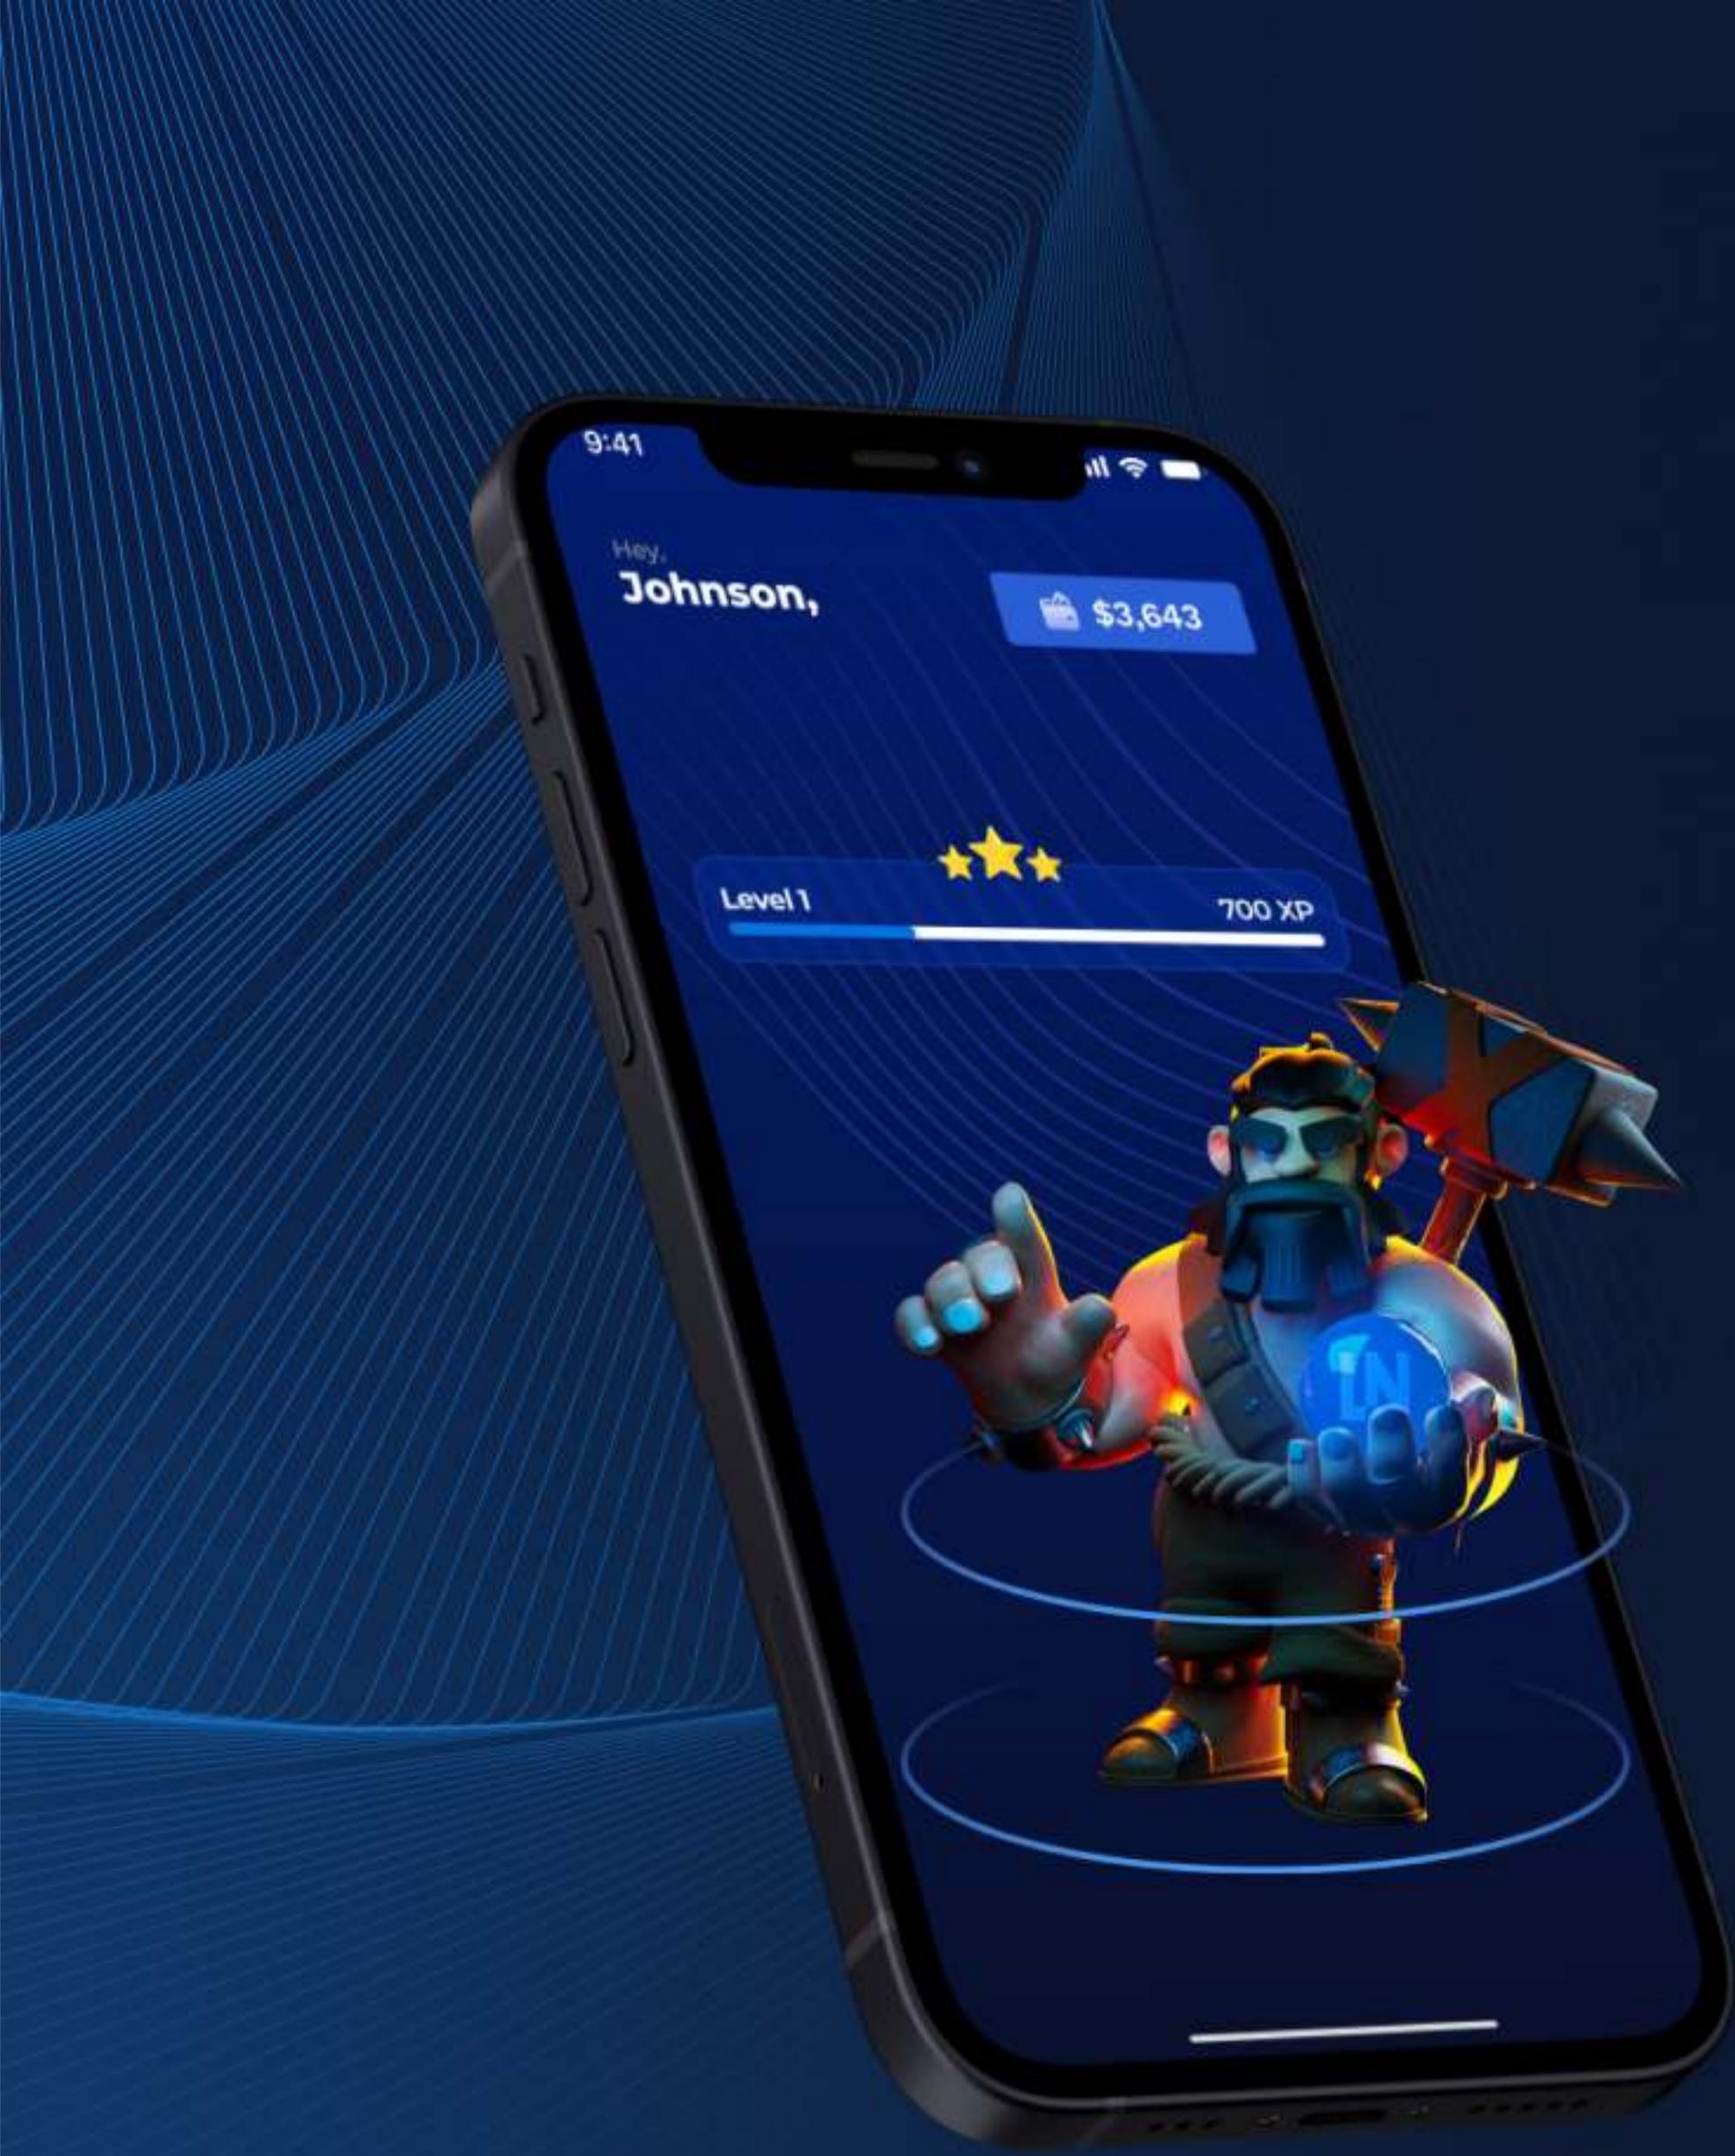

Why is Personal Development Important?

We humans tend to believe that we don't have much control over our destiny. We think that our potential is as limited as our possibilities are. In reality, these beliefs are an illusion. Our success/happiness is a direct reflection of our personality and our personality is a direct reflection of our individual programming.

This programming includes our **beliefs, thoughts, habits, behavior patterns and our neurological conditioning**. It controls everything. How we approach certain challenges, how quickly we recover from setbacks, how we react to different situations, etc. It also determines our **level of self confidence, self-love, resilience, assertiveness, discipline, emotional control, and more**.

These traits, in turn, lead to **success in career/finance, romantic relationships, platonic relationships, health, and all other important areas of life**. Many people find themselves in a reactive position. This means that they are not acting but reacting. Basically, they wait to see what happens next instead of actively shaping their lives. The reason for this is on the one hand hidden fears, and on the other hand a lack of feeling for one's own possibilities of influence. Conscious personality development can help here.

Legacy Network App

App

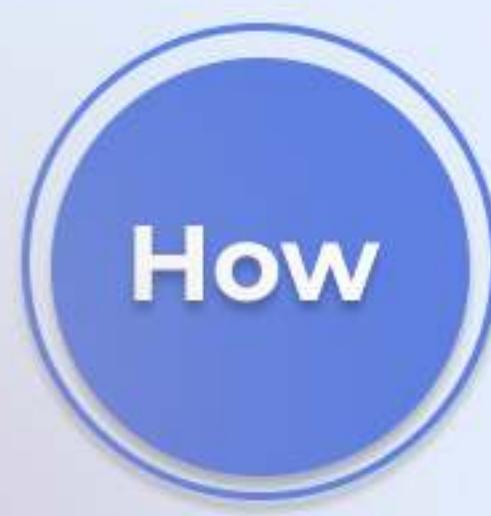

Our app answers three essential questions for the user:

Here, the user is told a fact, for example, that healthy self-confidence is important for success in various areas of life.

Subsequently, it is explained in detail why a healthy self-confidence is important. Understandable correlations are shown to create an "aha experience".

In the last step, the user is shown concrete steps on how to acquire self confidence. The big goal is divided into small, achievable steps. If a step is not feasible for the user, the artificial intelligence offers alternatives.

In addition to the strategies mentioned, users of our app will receive the following tools to put what they have learned into action:

Community

The community plays a significant role in our ecosystem. We humans are social creatures and we need other people with whom we can identify. Our social function offer users **the opportunity to exchange ideas with like-minded people** who are moving in the same direction and are facing similar challenges. In this regard, our system can connect the right people based on the collected user data.

Physical tools

We will launch an online store selling physical products that provide **additional support to the user**.

Education Area

In the education area of the app, the user can **choose from various categories**. Each category contains content, which can be text, video, animation, podcast (audio content) and other forms. **Each category has its own level system**. The AI uses targeted questions, user behavior, feedback, app tracking and other parameters to decide how advanced the user already is and **which content is relevant to him**. This makes the system **usable for everyone**, whether beginner or professional. The content consists of both a **theoretical and a practical part**. A topic is explained to the user in an understandable and detailed manner, after which the AI suggests **concrete strategies and goals** for implementation. The goals are added to the user account and the user is regularly reminded of them. If he does not achieve the goals, the **AI suggests suitable alternatives**. A new level is reached as soon as the user has completed the current level. Prerequisites for this are: All content must have been consumed (partially verifiable), he must have achieved the goals of the level (partially verifiable) and he must solve a small test (fully verifiable). **Rewards in the form of tokens and experience points are distributed for passing a level.**

Health Area

The health area of the final app version is expected to include the following features:

Detailed sleep analysis

Duration of falling asleep, total sleep duration, quality of sleep, sounds during sleep, etc.

Detailed nutritional analysis

Macro and micronutrients consumed, calories consumed, identification of deficiencies, individual goals, etc.

Time Management & Routine Planning

Calendar, timer and notification, routine overview and individual suggestions.

Important in this respect is that the **health and education areas**, or rather the collected data behind them, **are directly connected**. In this way, the AI always knows both the mental and physical state of the user. Based on this information, it can **solve the user's problems** by means of a process of exclusion or provide him with concrete analyses and viable solutions.

The first artifical intelligence designed to analyze human behavior

Our artificial intelligence evaluates the collected information about the user and utilizes it to deliver **individual and effective solutions**. Over time, the AI turns into a **personal coach** which knows more about the user, than he knows about himself.

It will be able to find **errors in a person's behavior, thinking and habit** which lead to failure in certain important life areas. By systematically adjusting these things, the user will experience a **great improvement in one's life quality**.

- Analyzes your personality, behavior patterns and much more
- Delivers individual strategies for your personal success
- Grants you access to valuable data about yourself
- Guides you step by step through the game of life

Legacy Network Wallet

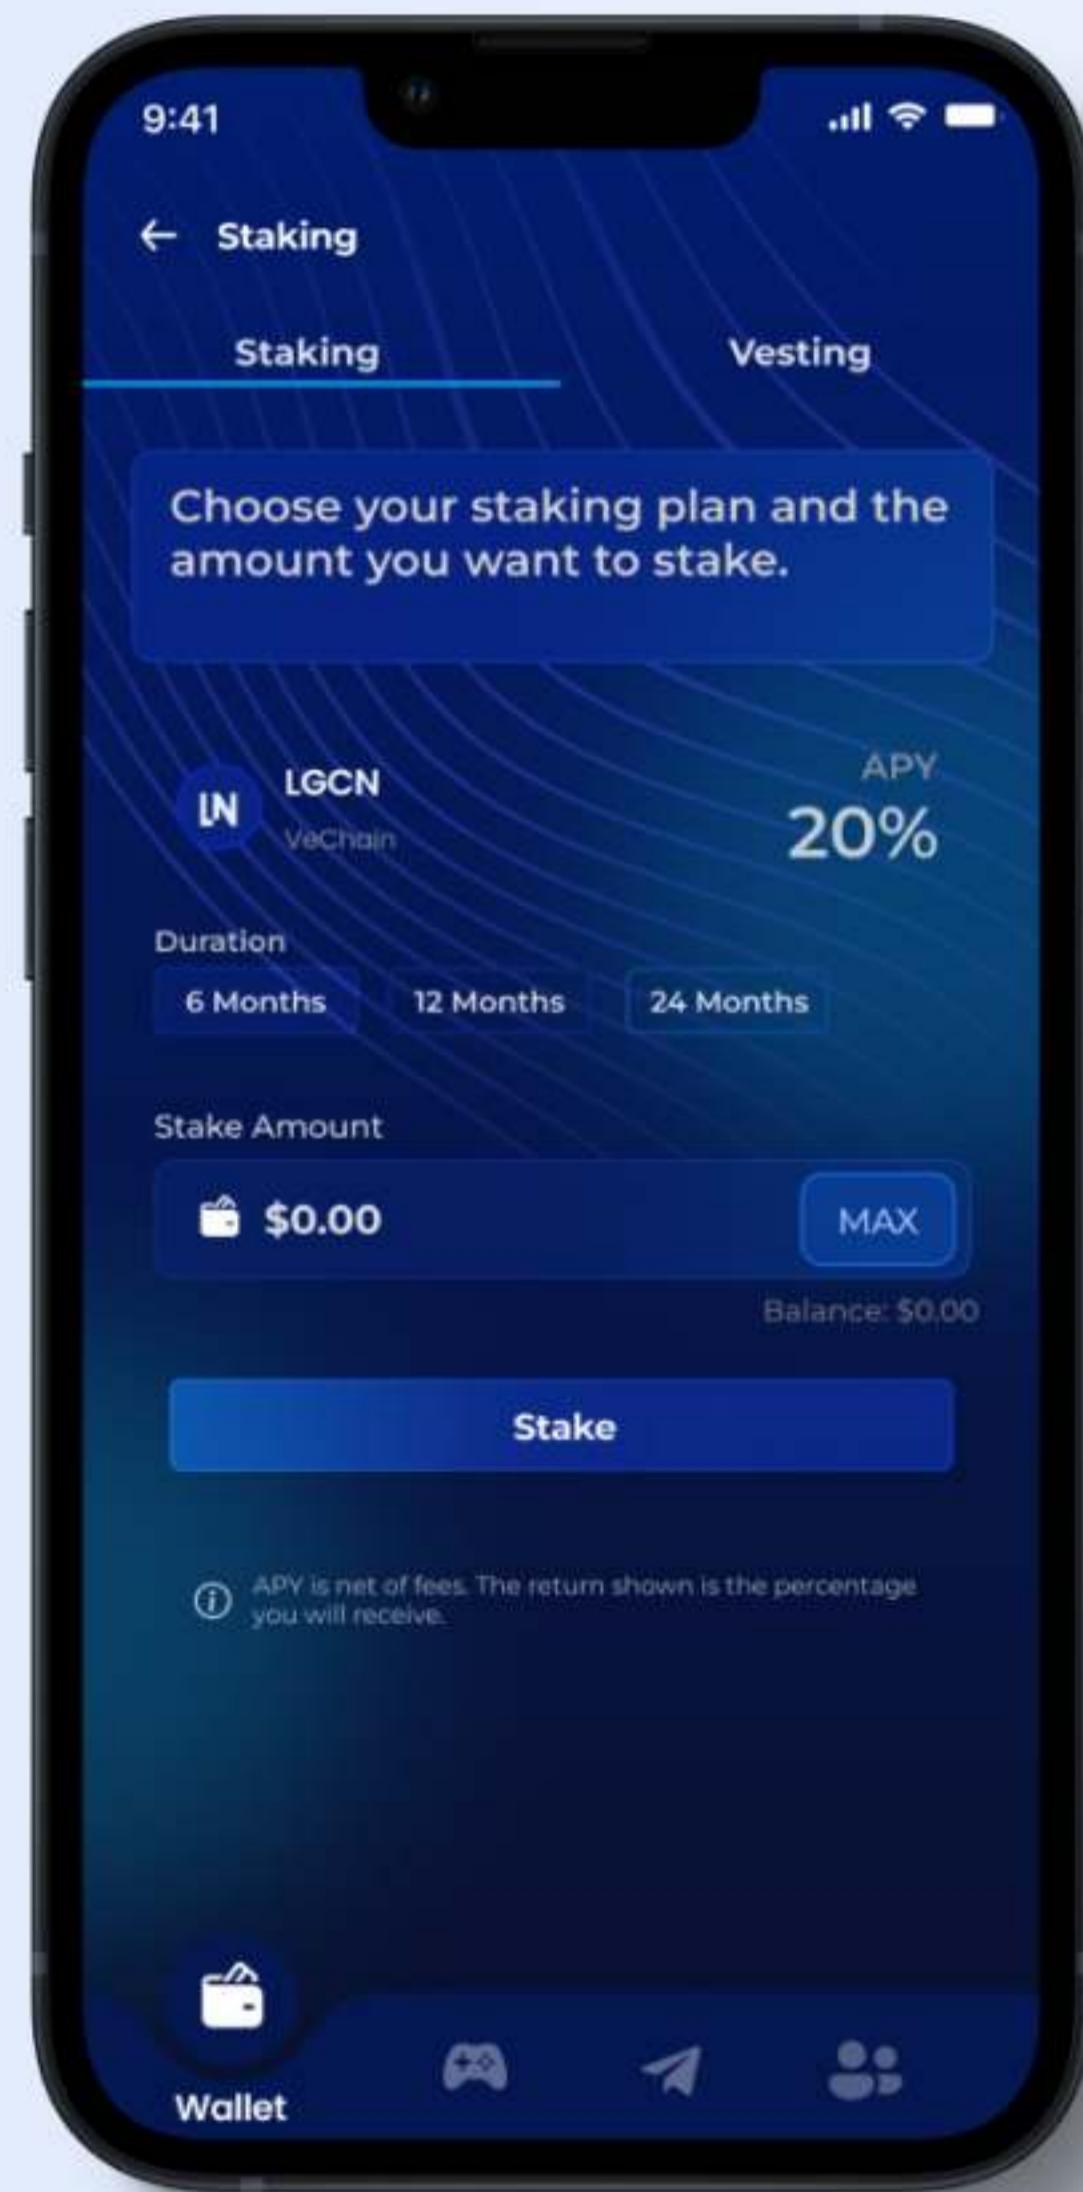

Managing

Users can manage their favorite cryptos in a **secure non-custodial wallet**. The legacy wallet allows to easily **hold, send and receive** tokens **on multiple blockchains**. The private keys are stored locally on the device so the user and **only the user has access** to his funds. Browsing through the NFT section allows to see all collectibles safe in one place. Additionally, the wallet comes with a **browser extension** which grants access to the exciting world of Web3.

Token and NFT support:

- VeChain
- Ethereum
- Binance Smart Chain
- Matic Polygon

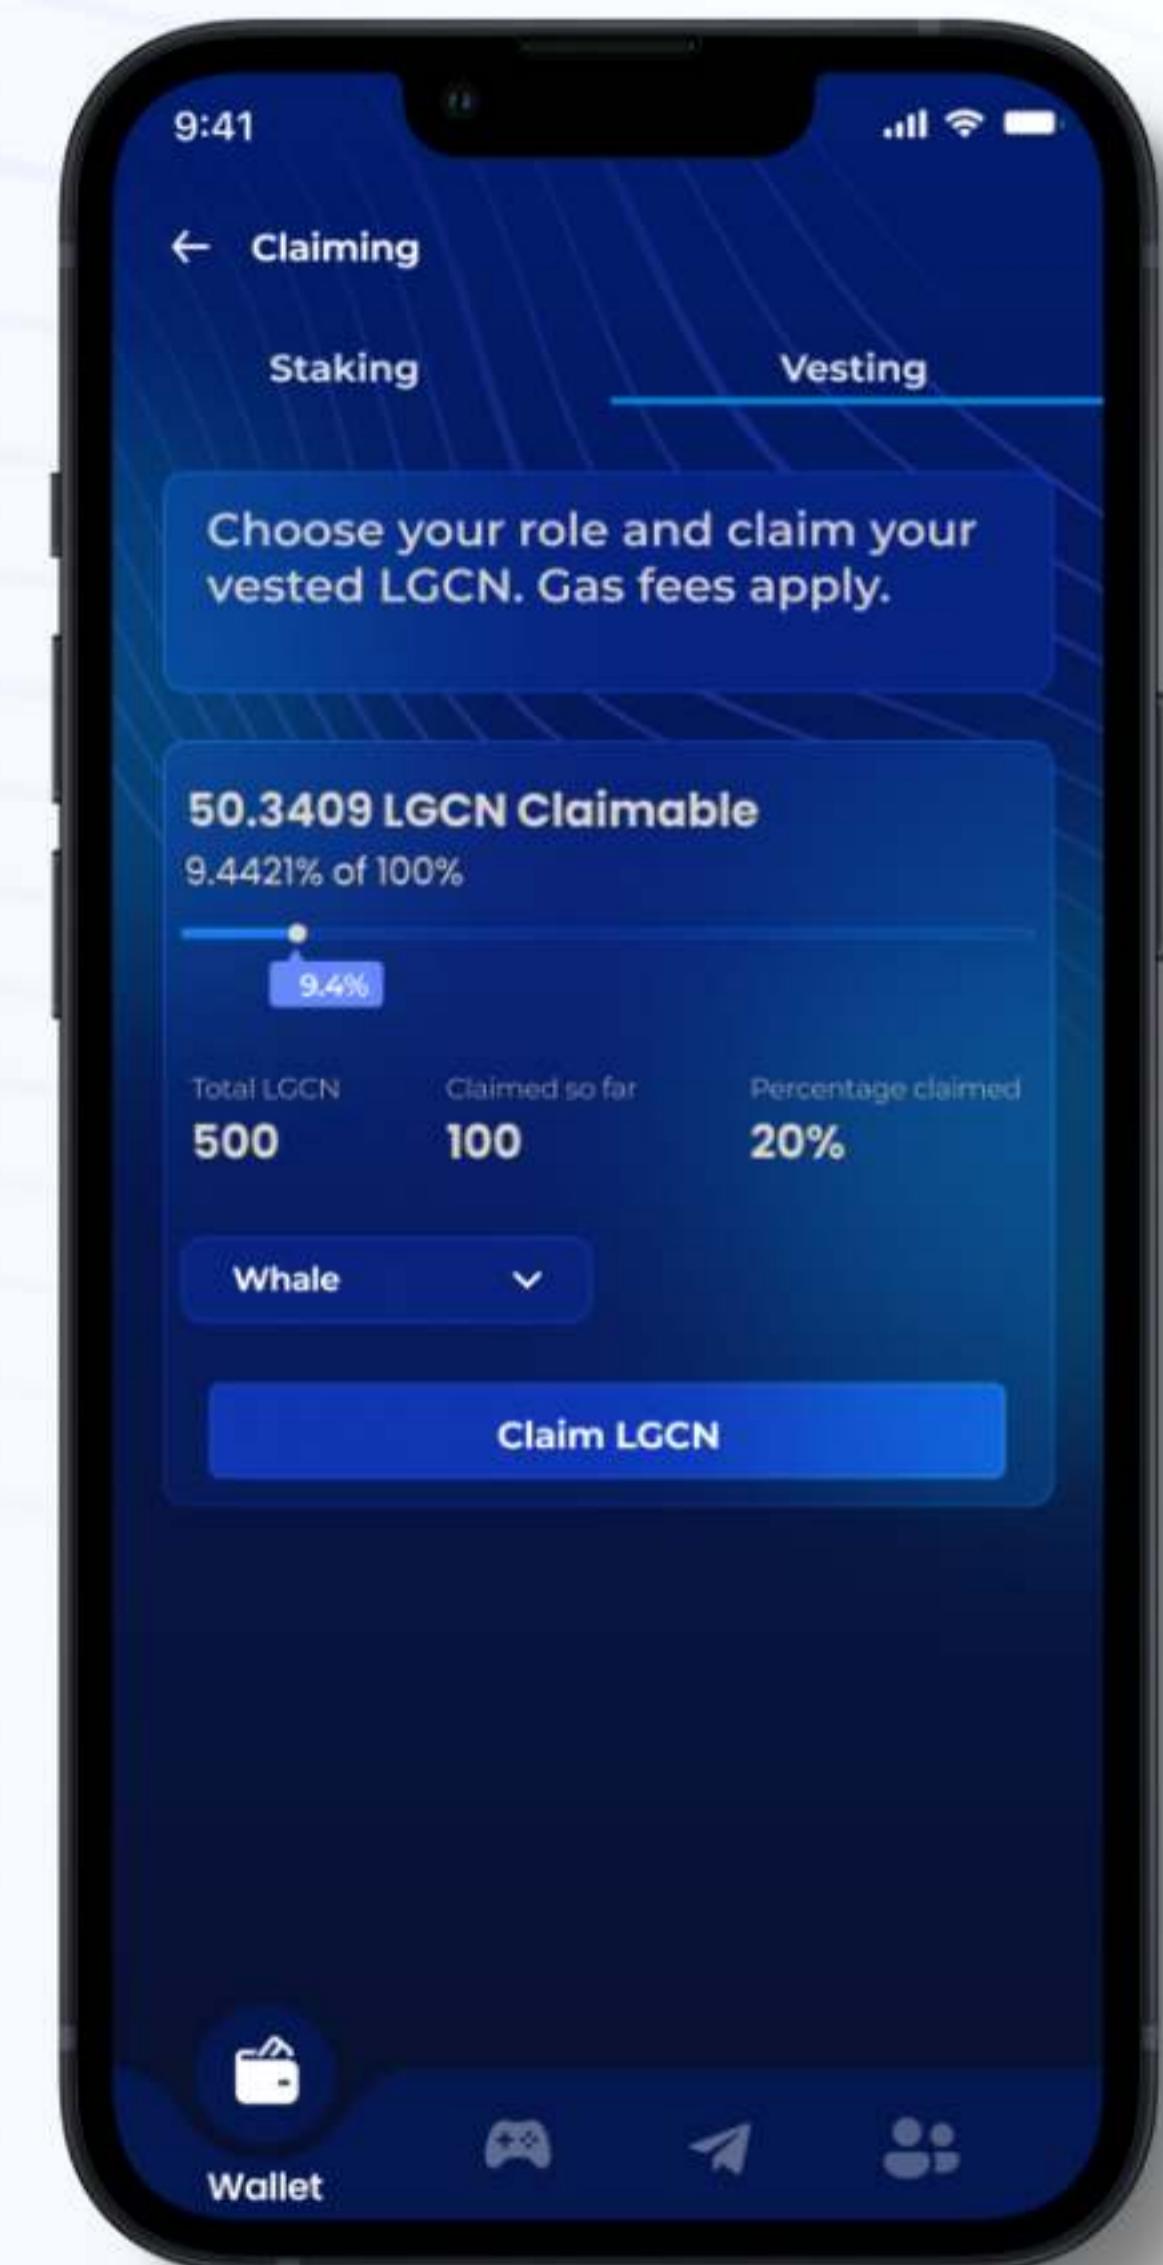

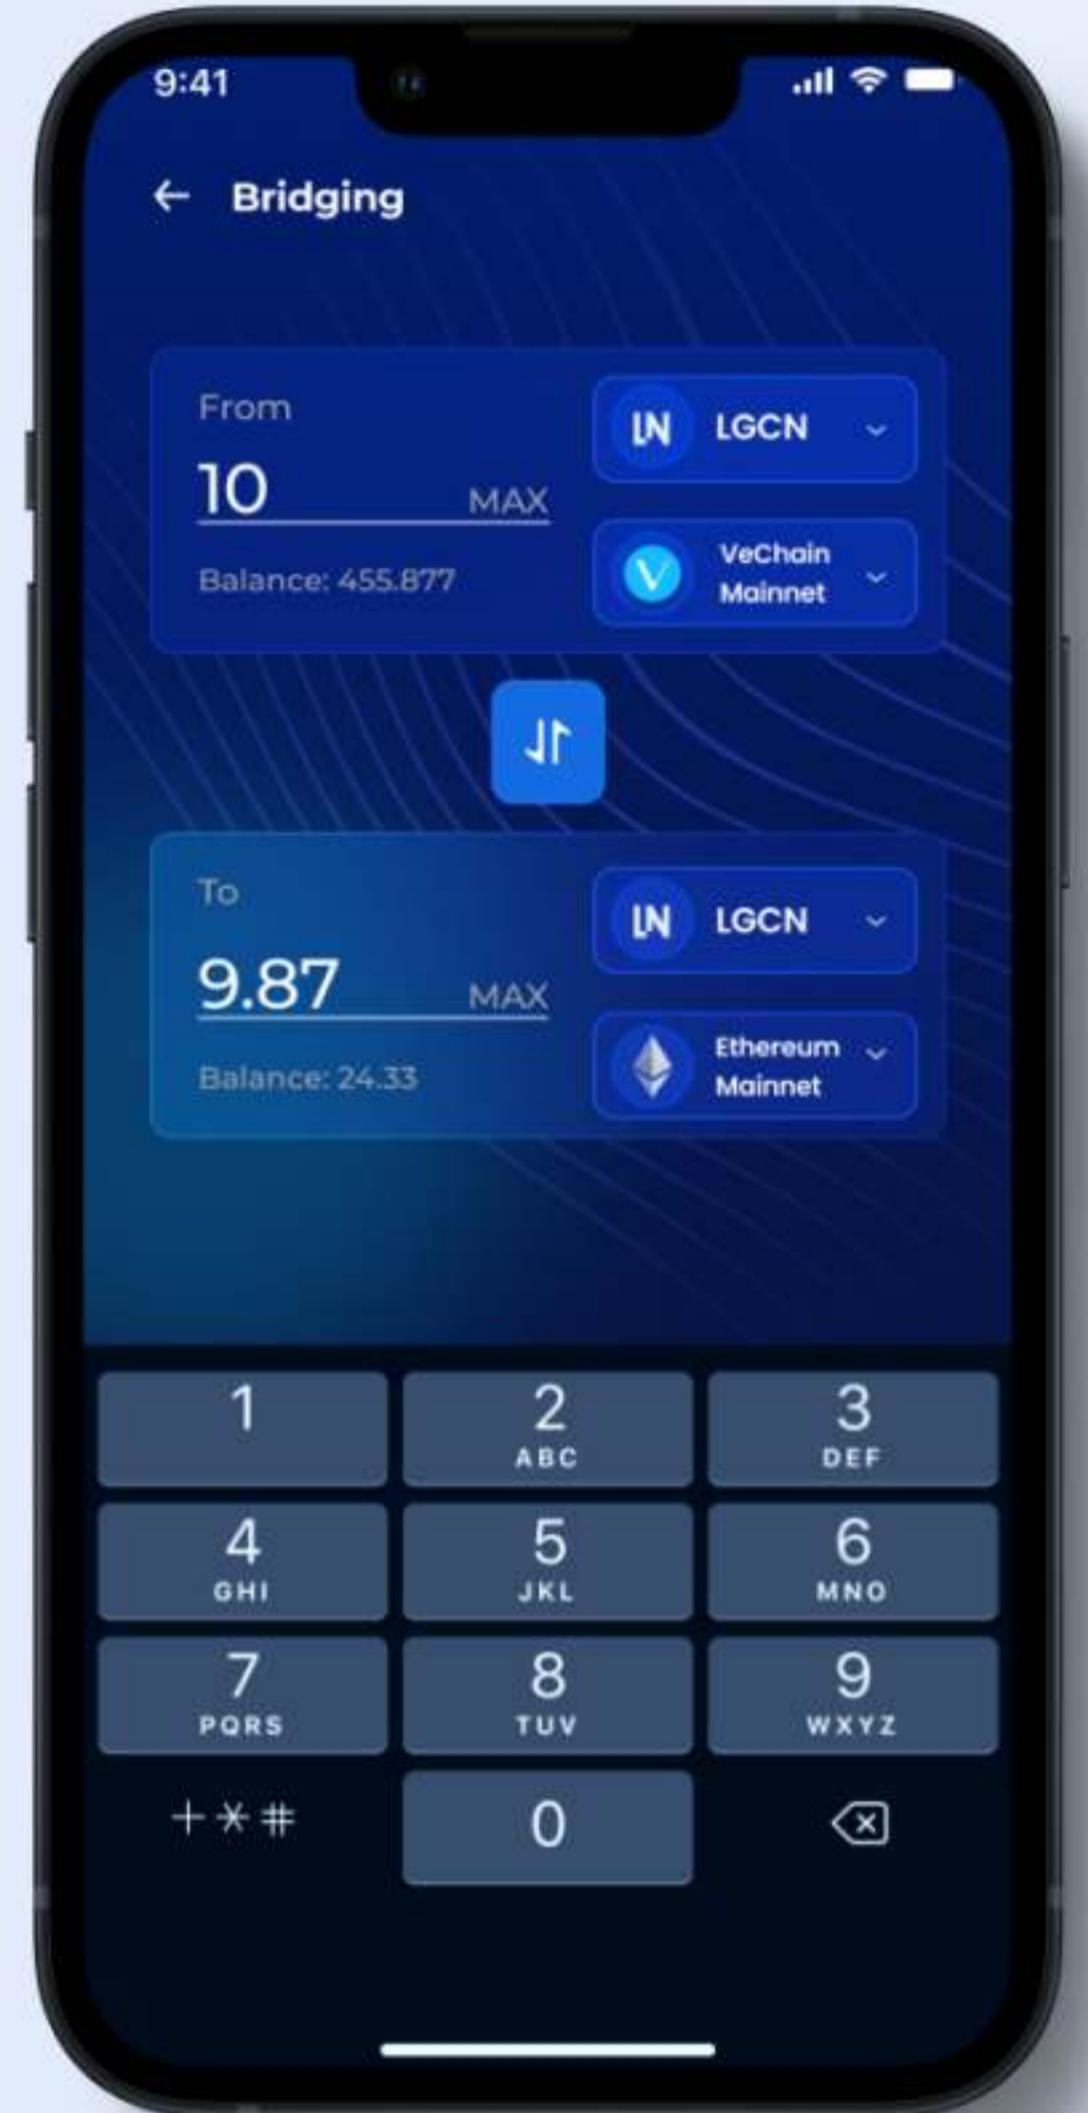

Staking

Long-term believers, can **stake their LGCN tokens** for 6, 12, or 24 months to **benefit from exclusive rewards**. Alternatively, the flexible staking option can be used, so funds can be withdrawn at any time. Our **flexible staking option** comes with an **auto-compounding** feature which saves the user's time by automatically claiming the rewards and by re-staking them. The tokens are held by audited smart contracts to grant **high security and performance**.

Vesting

Private sale, public sale or giveaway participants can **claim their vested LGCN tokens directly in the wallet**. The feature calculates the claimable amount live, so tokens can be claimed in an interval of their choice. Just like the staking contracts, the **vesting contracts are audited as well** which grants high security and performance.

Bridging

LGCN tokens can be **bridged between the supported blockchains in an instant** thanks to our SafeSwap integration. Atomic swaps are used which makes bridging **cheap, fast and secure**. More than that, we are working on an **auto-bridge feature** which allows users to send their LGCN tokens from one blockchain to another without needing to bridge them first.

The Legacy Network Token

What is LGCN

The **Legacy Network Token (LGCN)** is a multichain utility and payment token. Its purpose is to encourage users to use our ecosystem and actively contribute to its growth.

Features of Legacy Network Tokens (LGCN)

Play to earn: Distribution of reward chests for reaching a new level. Chests can include LGCN tokens, collectibles and other items.

Staking, respectively freezing tokens in a non custodial wallet to get access to benefits.

Distribution of tokens to users who perform a service within the ecosystem.

Payment of various **in-app purchases** (digital content) with LGCN tokens.

Blockchain

The **Legacy Network Token** will be available on **multiple blockchains**. **VeChain** as native blockchain, as well as **Binance smart chain, Ethereum** and **Polygon**. The goal of multiple blockchains is to address as broad a target group as possible, as well as to use the individual advantages of the respective blockchains. The circulation supply of the respective tokens is balanced by means of **atomic swap**, so that the statistics of the tokens cannot change independently of each other. For transferring tokens between the different blockchains, the new **cross-chain bridge** of safeswap is used.

This offers the following advantages:

1. We pay for the bridge integration, so our users don't have to pay bridge fees.
2. The bridge enables secure and simple atomic swaps between the respective blockchains.

Tokenomics

Our main goal is to create a **real utility token** with constant, non-speculative buy-side pressure. Due to our approach of offering a non-financial utility outside of the blockchain industry, the demand for our utility is expected to **not decrease in a bear-market**. The **subscription is paid in LGCN token**, this creates a constant monthly demand for the token. A share of the tokens which are paid for the subscriptions **flows directly back into the staking pool**, into the **play to earn pool** and into the **reward pool for NFT holders**. A small percentage goes to the Legacy Network company wallet. This percentage is used for the coverage of running costs and for the further development of our products and services. The remaining tokens get instantly burned which makes **LGCN deflationary**. A smart contract automatically sends them to a null address, this leads to a **decrease in the supply of LGCN token** while the demand for the token is expected to constantly increase with the increasing demand for the offered utility.

Usability

It's in our best interest to make our **ecosystem accessible for everyone**, this includes people who do not participate in the crypto space. For this reason, we aim to design our systems in a way which makes them **usable without the need for technical knowledge**. Most processes will happen in the background so the user can lay back and enjoy our services without concerns. We achieve this goal by implementing multiple mechanisms such as **gas-fee sponsoring** on VeChain and free **background bridging** of LGCN tokens between multiple blockchains thanks to our SafeSwap integration.

Vesting schedule

All tokens from the allocation will **either be vested or locked in separate contracts** which makes them technically inaccessible. This allows us to **stabilize the price of LGCN** in its most vulnerable stage after the listing. The tokens will be released in an appropriate timeframe and the **vesting-schedule will be publicly communicated**.

Token Allocation

In-game Character / Non-Fungible Token

One of our goals is to break common patterns and make our **app as playful as possible**. For this purpose, there will be an **animated 3D character**. He will serve as the central character within the app and can **grow in his level**, just **like the user grows in real life**. We plan to release an **NFT collection**, where the NFT can be loaded into the app as a character. People who own one of our NFTs will get **access to various achievements (utilities)** along with the character. The NFT collection is divided into different variety levels. This applies to both the design and the benefits that are unlocked.

Planned NFT utility

Legacy Network NFT owners receive:

- Free access to our ecosystem
- Reward distribution
- Access to special areas within the app
- In-game character
- Higher play-to-earn reward
- Network opportunities

Our RoadMap

Track our upcoming key milestones here!

Phase
1

July - August

- Token smart contract development for all 4 blockchains
- Token smart contracts first security audit
- Pre-production of social-media content for the next months
- Pre-launch app concept and user interface finished
- Setup of all community channels including bots and automatisms

Phase
2

August - September

- Launch of our new website
- Announcement of new utilities and strategies
- Alpha testing of the pre-launch app
- Expansion of our teams

September - October

- Step by step opening of our community channels
- Launch of our blog / documentation page
- Start of social-media and community activity
- Attending several blockchain events around the globe
- Announcement of new strategical partnerships
- Announcement of community web-board functions
- Announcement of partners web-board functions

October - November

- Start of intensive community building along with events
- Start of our web-based giveaway and referral program
- Launch of the community web-board (basic functions)
- Launch of the partners web-board (basic functions)
- Beta testing of the pre-launch app
- Start of our YouTube channel

Phase 5

November - December

- Public sale start (depending on the markets)
- Security audits of all smart-contracts
- Pre-launch app release for IOS and android
- Launch of our wallet web-extension
- Token deployment on the blockchain
- LGCN listing on the SafeSwap multi-chain bridge

Phase 6

December - January

- Alpha testing of our main app
- Start of NFT marketing and whitelisting
- Start of our surprise marketing campaign

Q1 2023

- Free NFT mint for whitelisted participants
- Beta testing of the main app
- Pre-listing on coinmarketcap
- LGCN listing on a centralized exchange
- Launch of the first version of our main app
- End of the web-based giveaway

Q2 2023

To be continued...

Security

Data Protection

Part of our vision is to **give people back control of their data**. Legacy Network is the first technology company to use users' data and psychology **exclusively for them**, not against them. Unlike various Big Data corporations, **we will not monetize data** and thus **will not make our platforms available for serving ads**. Although **user profiles** will be created, these **cannot be assigned to a real person**, as we will not collect any personal data such as name or address. In this way, users can interact with each other **anonymously and without concern**. Nevertheless, to ensure the security of the network, some Internet-related data such as the user's IP address will be collected. This offers the possibility, in an emergency (for example, in case of a crime or threat), to support the responsible investigating authorities and to exclude users from the network in the event of gross violations. A concrete **data protection concept** will be worked out during development together with experts.

Cyber Security

To ensure the security of our entire ecosystem, we will have **several independent security audits performed**. This concerns the token, or smart contract, as well as the app and all platforms. We will **analyze past cyber-attacks on other systems** and design our own systems to be immune to these as well as other attacks.
